# Land Data Assimilation Systems: Motivation

## Quantification and prediction of hydrologic variability

- Critical for initialization and improvement of **weather/climate forecasts**
- Critical for **applications** such as floods, agriculture, military operations, etc.

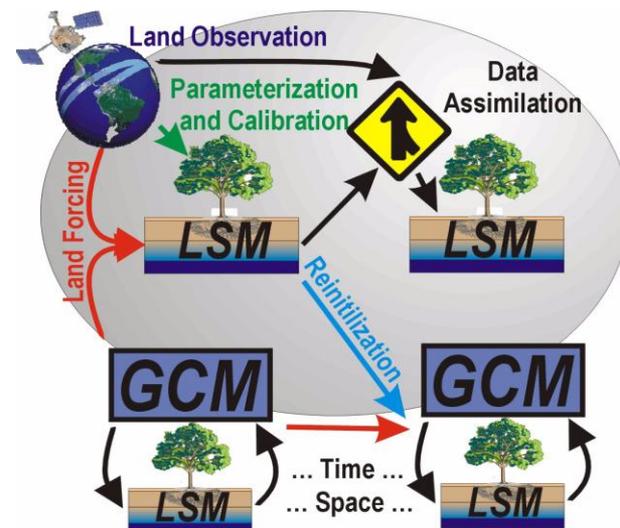

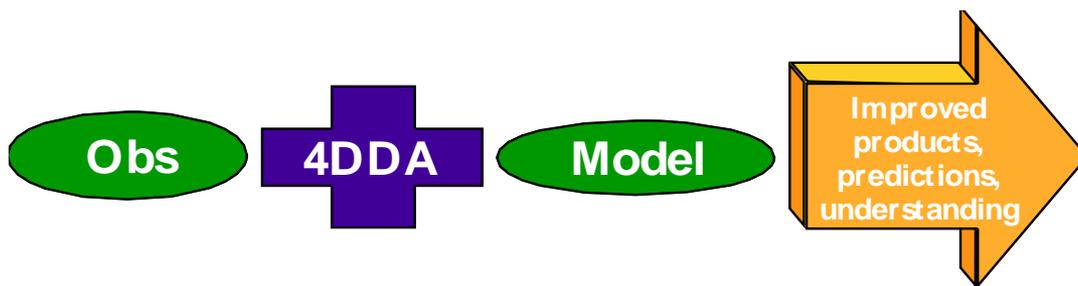

## Maturing of hydrologic observation and prediction tools:

- Observation: Forcing, storages(states), fluxes, and parameters.
- Simulation: Land process models (Hydrology, Biogeochemistry, etc.).
- Assimilation: Short-term state constraints.

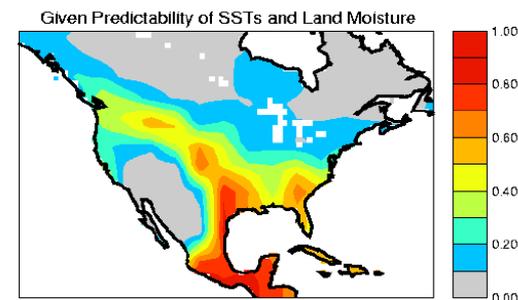

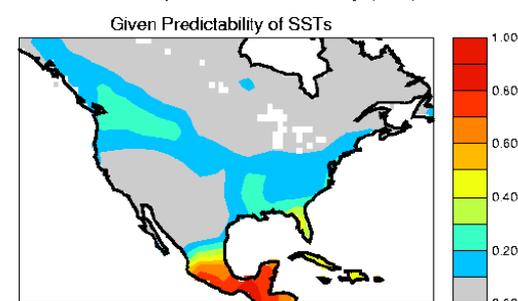

### “LDAS” concept:

Bring state-of-the-art tools together to operationally obtain high quality land surface conditions and fluxes.

- **Optimal integration** of land surface observations and predictions.
- Continuous in time&space; multiple scales; retrospective, realtime, forecast

Index of Precipitation Predictability (JJA):

# Background: Land Surface Observations

**Precipitation:** *Remote-Sensing:* SSM/I, TRMM, AMSR, GOES, AVHRR

*In-Situ:* Surface Gages and Doppler Radar

**Radiation:** *Remote-Sensing:* MODIS, GOES, AVHRR

*In-Situ:* DOE-ARM, Mesonets, USDA-ARS

**Surface Temperature:** *Remote-Sensing:* AVHRR, MODIS, SSM/I, GOES

*In-Situ:* DOE-ARM, Mesonets, NWS-ASOS, USDA-ARS

**Soil Moisture:** *Remote-Sensing:* TRMM, SSM/I, AMSR, **HYDROS**, ESTAR, NOHRSC, SMOS

*In-Situ:* DOE-ARM, Mesonets, Global Soil Moisture Data Bank, USDA-ARS

**Groundwater:** *Remote-Sensing:* GRACE

*In-Situ:* Well Observations

**Snow Cover, Depth & Water:** *Remote-Sensing:* AVHRR, MODIS, SSM/I, AMSR, GOES, NWCC, NOHRSC

*In-Situ:* SNOTEL

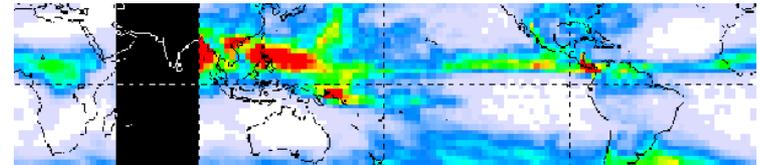

**Streamflow:** *Remote-Sensing:* Laser/Radar Altimeter

*In-Situ:* Real-Time USGS, USDA-ARS

**Vegetation:** *Remote-Sensing:* AVHRR, TM, VCL, MODIS, GOES

*In-Situ:* Field Experiments

**Others:** Soils, Latent & Sensible heat fluxes, etc.

**Land Surface Prediction:** Accurate land model prediction is essential to enable data assimilation methods to propagate or extend scarce observations in time and space. Based on **water and energy balance**.

Input - Output = Storage Change

$$P + G_{in} - (Q + ET + G_{out}) = \Delta S$$

$$R_n - G = Le + H$$

**Mosaic** (Koster, 1996):

- Based on simple SiB physics.
- Subgrid scale "mosaic"

**CLM** (Community Land Model, ~2001):

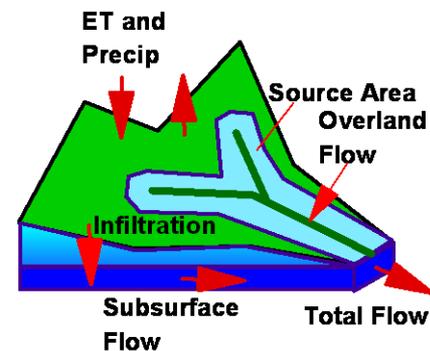

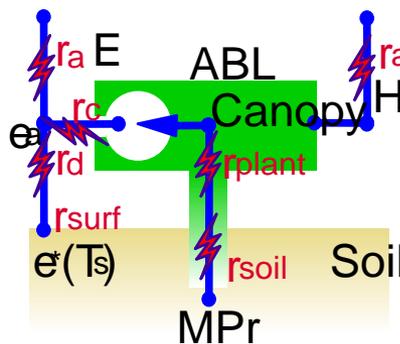

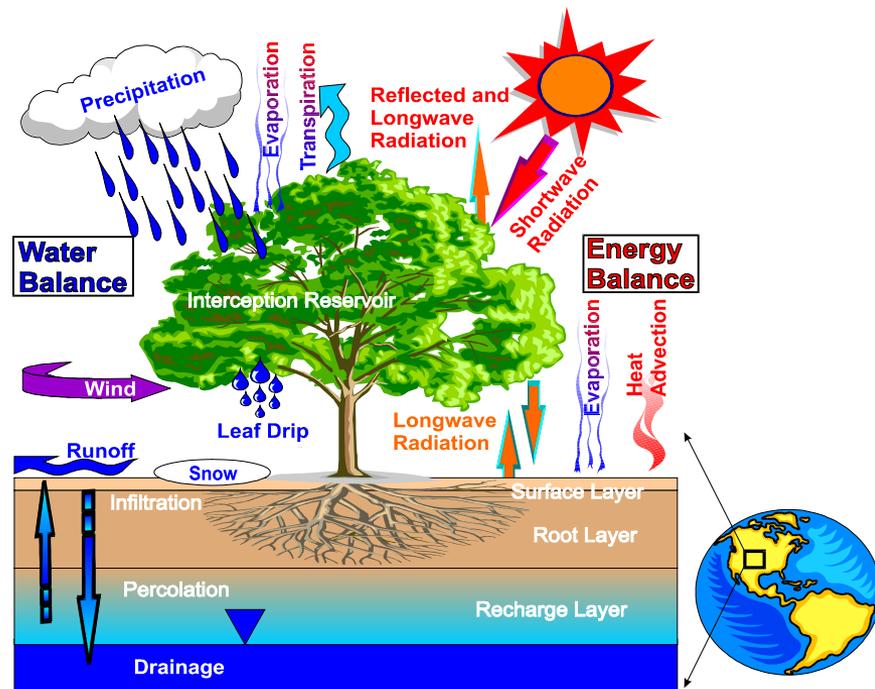

- Community developed "open-source" model.
- 10 soil layers, 5 layer snow scheme.

**Catchment Model** (Koster et al., 2000):

- Models in catchment space rather than on grids.
- Uses Topmodel concepts to model groundwater

**NOAA-NCEP-NOAH Model** (NCEP, ~2001):

- Operational Land Surface model.

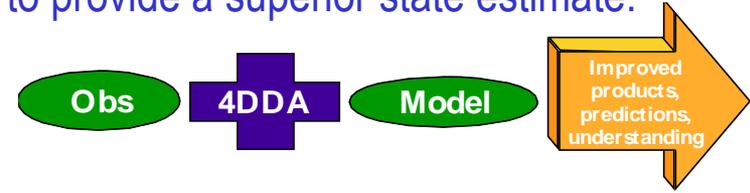

Also: vic, bucket, SiB, etc.

# Land Data Assimilation

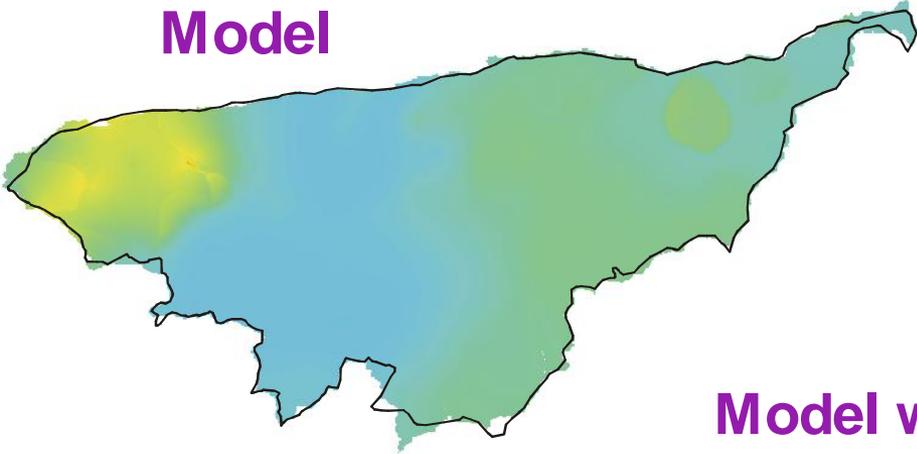

**Data Assimilation** merges observations & model predictions to provide a superior state estimate.

$$\frac{\partial x}{\partial t} = \text{dynamics} + \text{physics} + \Delta x$$

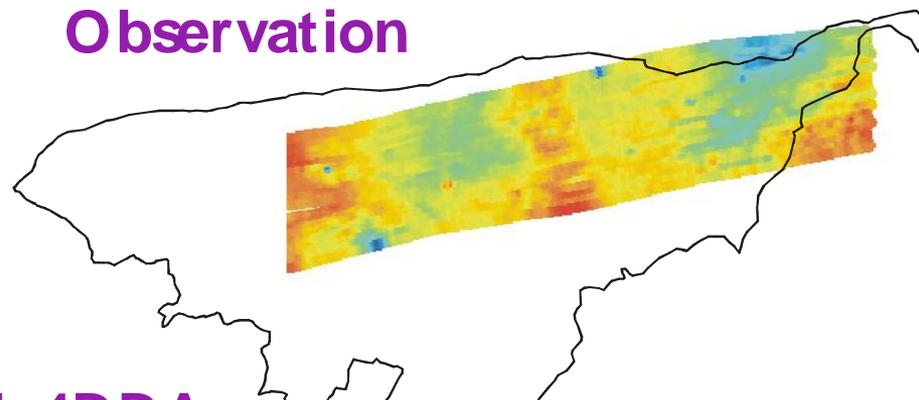

Remotely-sensed hydrologic **state** or storage observations (**temperature, snow, soil moisture**) are integrated into a hydrologic model to improve prediction, produce research-quality data sets, and to enhance understanding of complex hydrologic phenomenon.

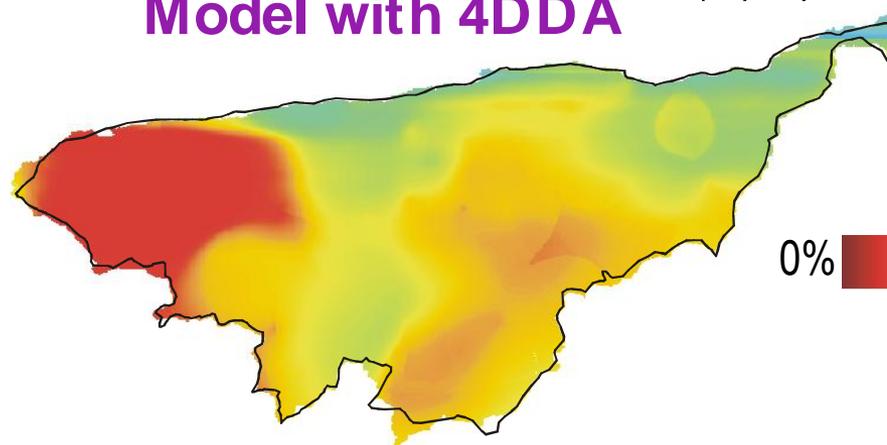

**Model**

**Observation**

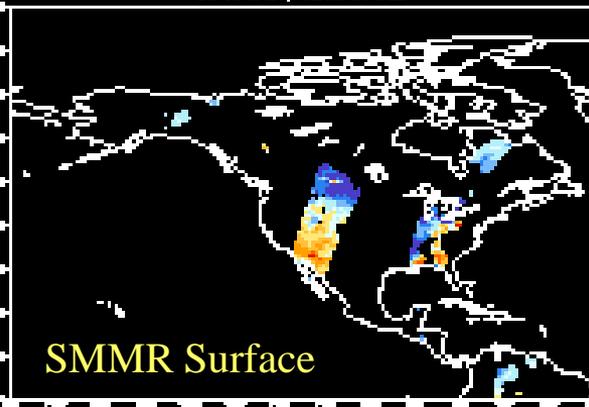

**Model with 4DDA**

## Soil Moisture Observation Error and Resolution Sensitivity:

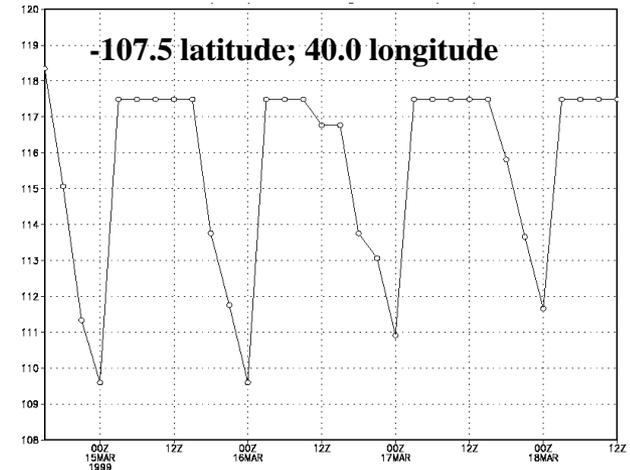

**NOTE:**  
Assimilation of near-surface soil moisture can degrade profile soil moisture if errors are not known perfectly

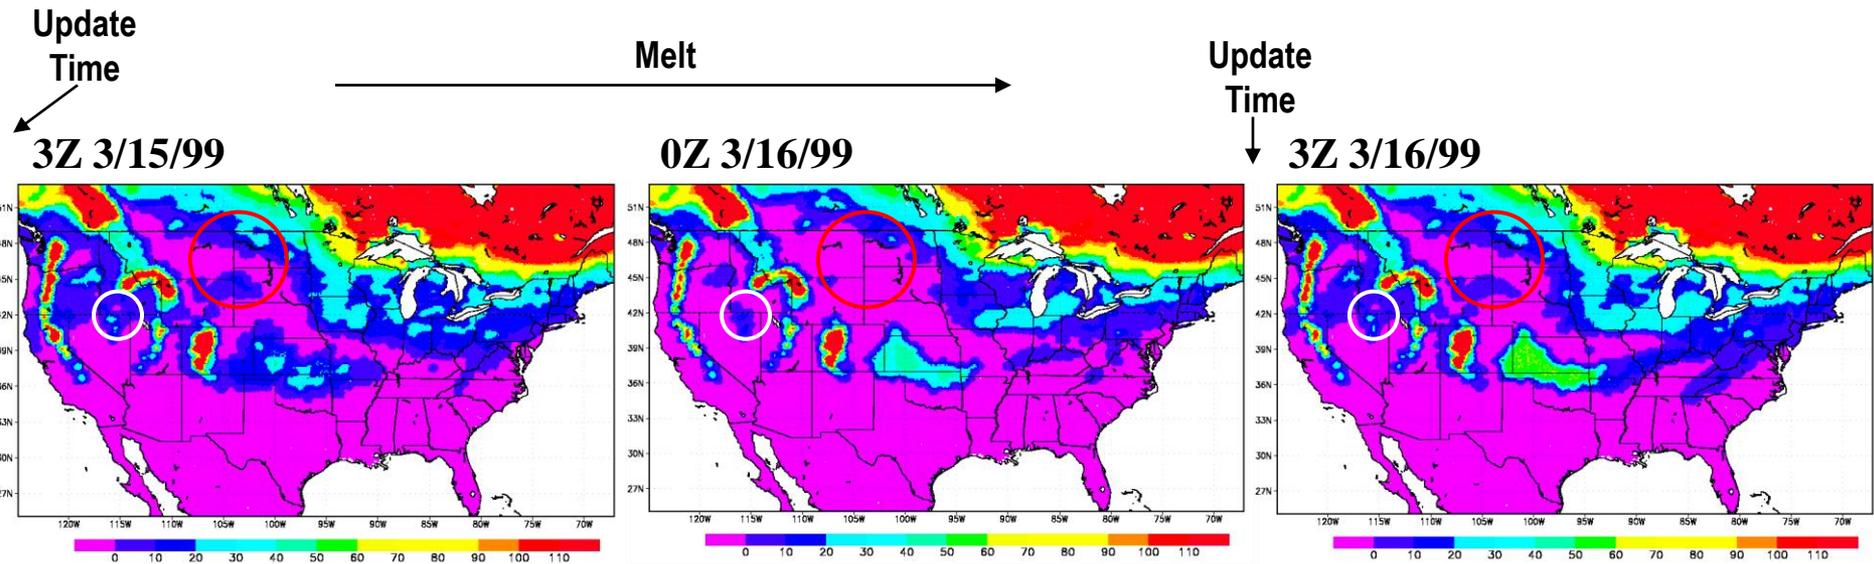

# Data Assimilation: Importance of Snow

- In the northern hemisphere the snow cover ranges from 7% to 40% during the annual cycle.
- The high albedo, low thermal conductivity and large spatial/temporal variability impact both the energy and water budgets.
- Snow adjacent to bare soil causes mesoscale wind circulations.
- Direct replacement does not account for model bias.

## NCEP-Eta Snow Updating

# Snow Data Assimilation

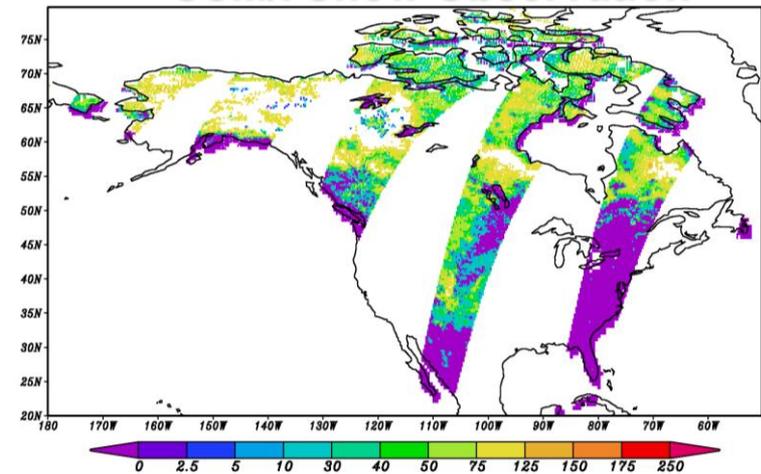

## Goals

- Develop a Kalman filter snow assimilation to overcome current limitations with assimilation of **snow water equivalent, snow depth, and snow cover**.
- Investigate novel snow observation products such as **snow melt signature and fractional snow cover**.
- Provide a basis for global implementation.

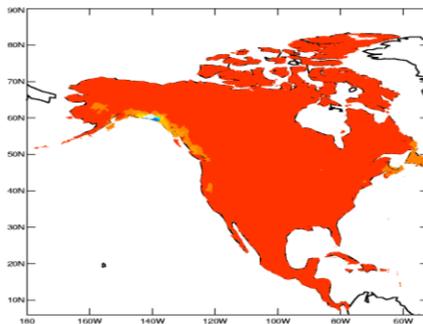

## Unique Snow Data Assimilation Considerations:

- “Disappearing” layers and states
- Arbitrary redistribution of mass between layers
- Lack of information in SWE about snow density or depth
- Lack of information in snow cover about snow mass & depth
- Biased forcing causing divergence between analysis steps

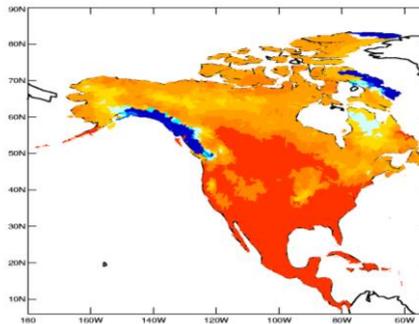

## SSM/I Snow Observation

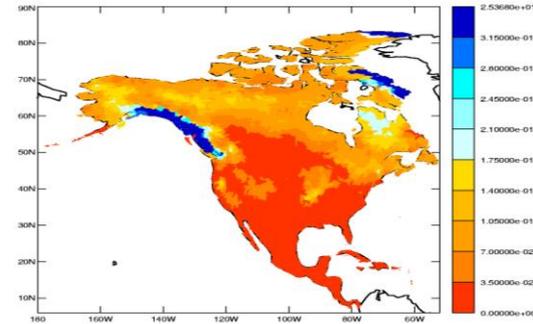

Open Loop

Truth

Assimilation

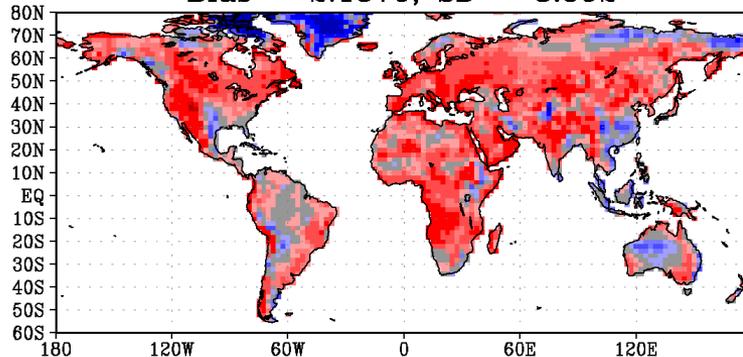

# Surface skin temperature data assimilation

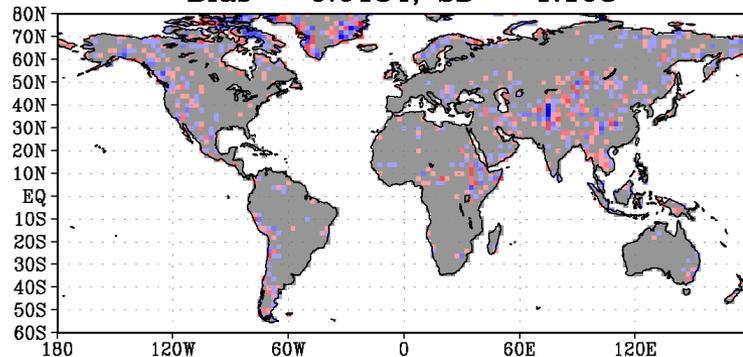

DAO-PSAS **Assimilation of ISCCP (IR based) Surface Skin Temperature** into a global 2 degree uncoupled land model.

JJA 1992 Skin Temperature (K)

Model - Obs  
Bias = 2.1570; SD = 3.592

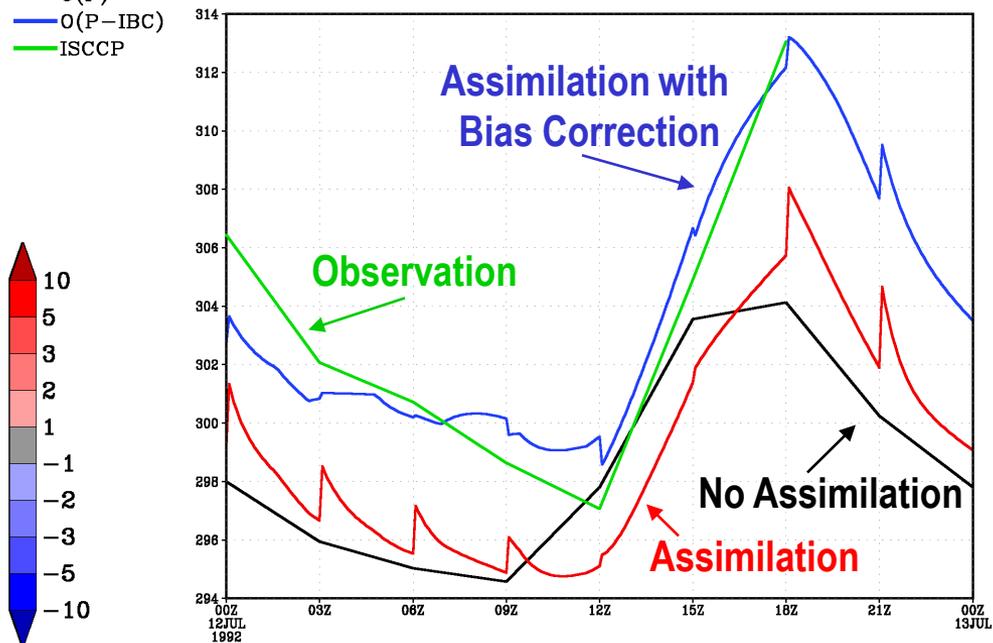

Assim.V - Obs  
Bias = 0.0134; SD = 1.103

— OLGA  
— O(P)  
— O(P-IBC)  
— ISCCP

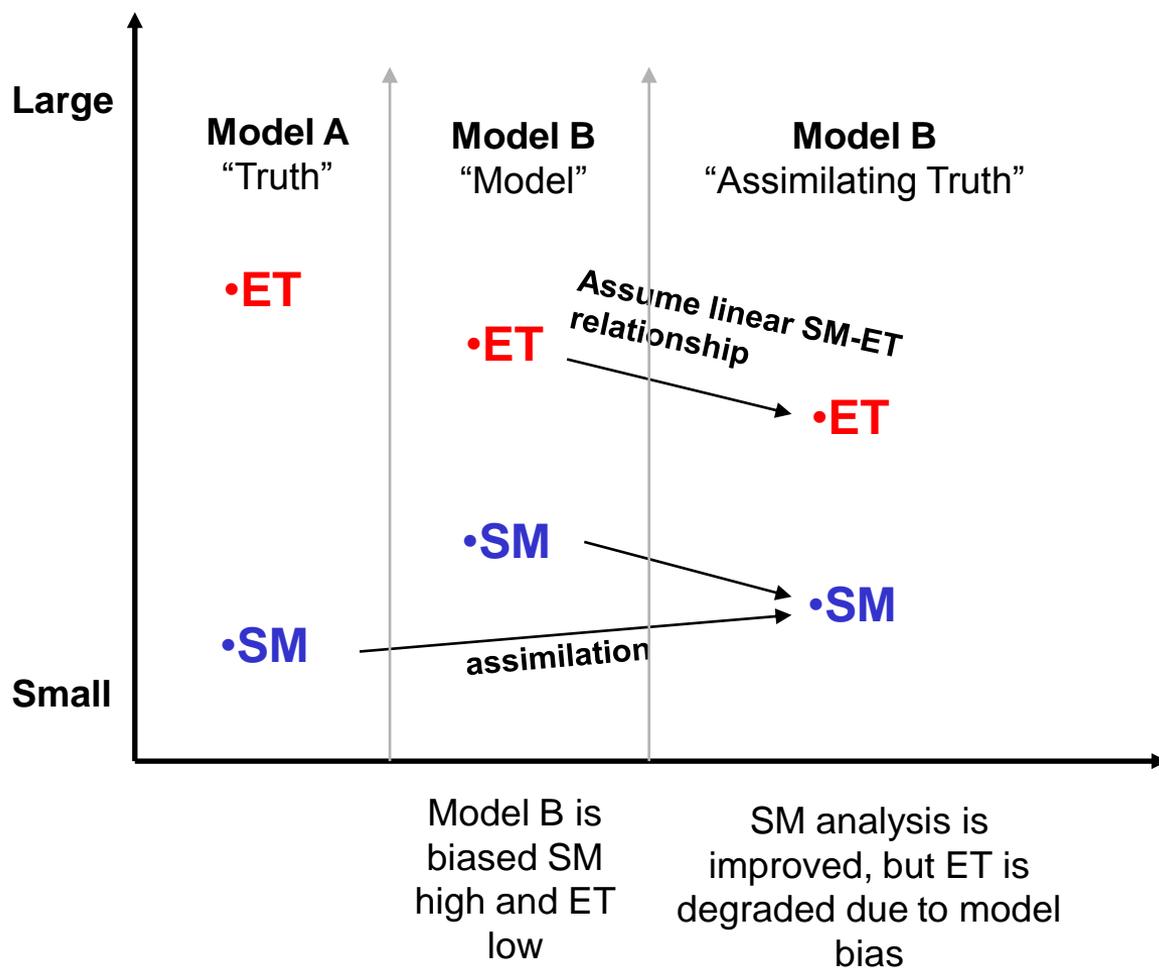

Surface Skin Temperature (K) 34°, -100°

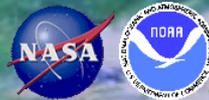

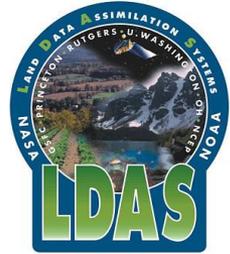

**Surface temperature** has **very little memory** or inertia, so without a continuous correction, it tends drift toward the control case very quickly.

# Fraternal Twin Studies

- “Truth” from one model is assimilated into a second model with a biased parameterization
- The “truth” twin can be treated as a perfect observation to help illustrate conceptual problems beyond the assimilation procedure.

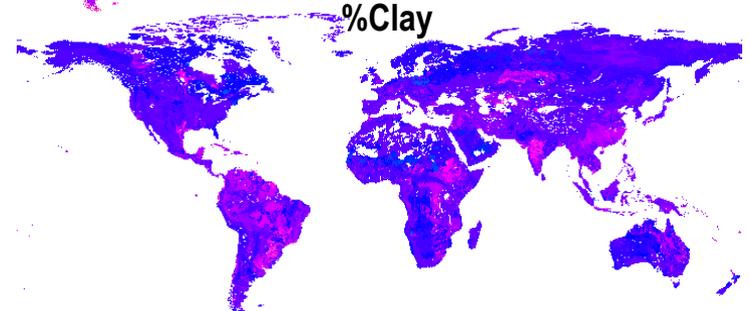

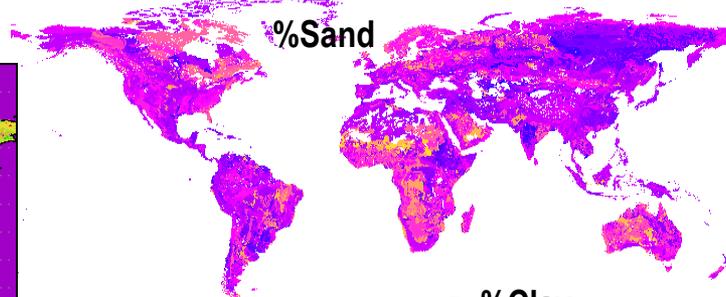

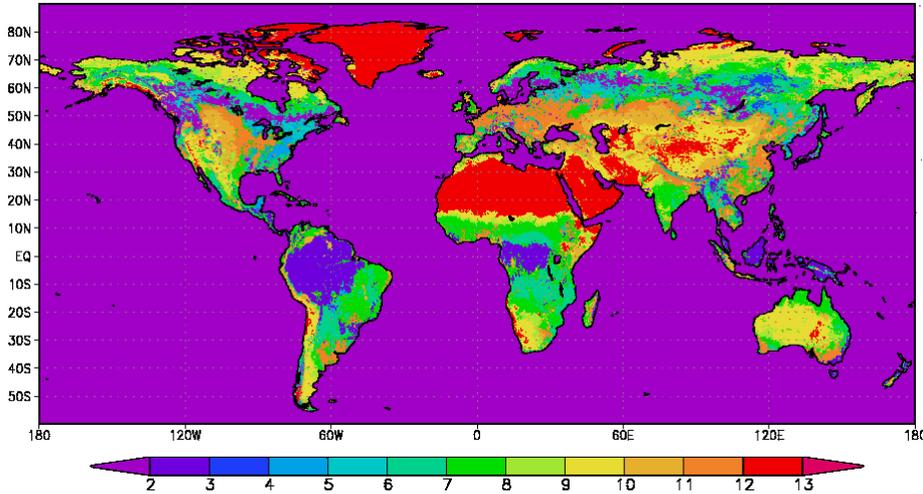

*We must not only worry about obtaining an optimal model constraint, but also understand the implications of that constraint.*

## Land Data Assimilation: Selected Future Challenges

**Data Assimilation Algorithm Development:** *Link calibration and assimilation* in a logical and mutually beneficial way and move towards *multivariate assimilation* of data with complementary information

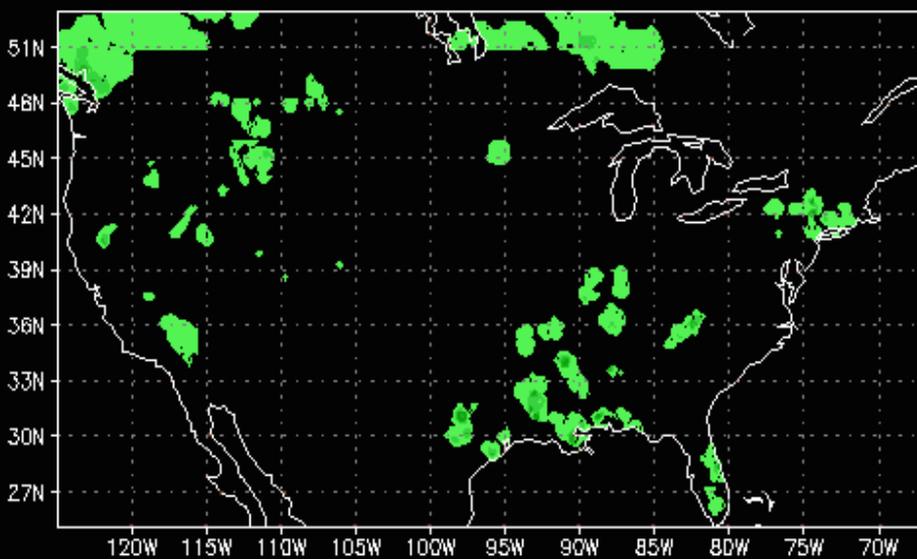

**Land Observation Systems:** Regular provision of *snow, soil moisture, and surface temperature* with knowledge of *observation errors*

**Land Modeling:** Better *correlation* of land model states with observations, and knowledge of *prediction errors* and Advanced processes: *River runoff/routing, vegetation and carbon dynamics, groundwater interaction*

**Assimilate new types of data:** Streamflow, vegetation dynamics, groundwater/total water storage (Gravity), evapotranspiration

**Coupled feedbacks:** Understand the impact of land assimilation feedbacks on coupled system predictions.
